

# Aaron T. Wright

902 Battelle Blvd, Box 999, MSIN J4-02  
Richland, WA 99352  
(509) 372-5920  
Aaron.Wright@pnnl.gov

850 Rand Drive  
Richland, WA 99352  
(509) 768-9041  
at.wright@wsu.edu

Webpage: <https://omics.pnl.gov/staff-page/Wright/Aaron>

**Areas of Expertise:** Organic chemistry & chemical biology; Activity-based protein profiling; Drug target identification, repurposing, and metabolism; Functional characterization of the impact of drug and xenobiotic exposures on microbial communities, human cells and tissues.

---

## Employment

- Oct 2017 - Present  
**Pacific Northwest National Laboratory (PNNL), Richland, WA**  
Leader of the Chemical Biology & Exposure Sciences Group within the Biological Sciences Division
- Jan 2017 - Present  
**Pacific Northwest National Laboratory, Richland, WA**  
Staff Scientist, Level V (of V)  
Biological Sciences Division
- Oct 2008 - Dec 2016  
**Pacific Northwest National Laboratory, Richland, WA**  
Senior Scientist, Level IV  
Biological Sciences Division
- Aug 2014 - Present  
**Washington State University (WSU), Pullman, WA**  
Joint Faculty Appointee, Research Associate Professor  
Department of Chemical Engineering and Bioengineering
- Aug 2012 - Present  
**Washington State University, Pullman, WA**  
Adjunct Professor, Graduate Faculty  
School of Molecular Biosciences & College of the Environment

## Scientific Preparation / Education

- Jul 2006 - Sept 2008  
**The Scripps Research Institute, La Jolla, CA**  
Postdoctoral Fellow of the California Breast Cancer Research Program  
*Activity-Based Protein Profiling of the Cytochrome P450 Enzyme Family*  
Advisor: Professor Benjamin F. Cravatt
- Aug 2001 - Apr 2006  
**The University of Texas, Austin, TX**  
Ph.D. in Organic Chemistry, Graduate Fellow of the Banks Foundation  
*Molecular Recognition of Bioanalytes Using Synthetic Selective and Differential Receptors*  
Advisor: Professor Eric V. Anslyn
- May 2000 - Sept. 2000  
**The University of Washington, Seattle, WA**  
National Science Foundation–Research Experience for Undergraduates Fellow  
*Fluorinated Warfarin Derivatives to Probe the Active Site of P450 2C9*  
Advisor: Professor William F. Trager
- Aug. 1997 - May 2001  
**George Fox University, Newberg, OR**  
B.S. in Chemistry – Departmental Highest Honors and cum Laude  
*Synthesis of Cholesteric Liquid-Crystal Displays for Barbiturate Recognition*  
Advisor: Professor R. Carlisle Chambers

## University Teaching Experience

Fall 2015-  
Present

### **MBIOS 413/513; Department of Molecular Biosciences, Washington State University, Richland, WA**

I developed the curriculum and each fall semester I teach a three-credit upper division and graduate course, "*Advanced Biochemistry*." The aim of the course is to have students dig deeply into foundational biochemistry topics, technology, and scientific literature. Specifically, we study the structure and function of proteins, nucleic acids and biological membranes, principles of enzymology, and omics & biochemistry technologies. The course has a strong focus on current literature and modern technologies for biochemistry.

Spring 2016-  
Present

### **CHEM 490; Department of Chemistry, Washington State University, Richland, WA**

I developed the curriculum and each spring semester I teach a three-credit course, "*Chemical Biology: Emergent Chemistry Technologies for Biological Research*." This course focuses on recent organic chemistry & chemical biology approaches for much improved characterization of biological pathways, functions, interactions, etc. These approaches include non-natural amino acids, chemical probing, chemical genetics, chemical ecology, chemical physiology, synthetic biology, etc. The course relies on the current literature, features discussions on the pioneers and emerging scientific leaders in chemical biology, and helps students develop, present, and defend independent scientific hypotheses.

Fall 2013

### **CHEM 410/510; Department of Chemistry, Washington State University, Richland, WA**

I developed the curriculum and taught a one semester, three credit, upper division and graduate course, "*Introduction to Proteomics*." This course focused on the analytical, biochemical, and chemical facets of the field of proteomics, with direct correlations to human health, the environment, and bioenergy. I lectured, recruited guest speakers, advised students, wrote and graded homework and exams, and oversaw group projects.

Spring 2005

### **Department of Chemistry, University of Texas, Austin, TX**

Teaching Assistant for the upper division and graduate course, "*Advanced Physical Organic Chemistry*." I led recitation and review sessions, held office hours, and assisted in writing and grading exams. While a TA for this course I worked with Prof. Eric Anslyn to refine the content for his textbook, "*Modern Physical Organic Chemistry*," prior to its publication in 2006.

Spring 2003

### **Department of Biological Sciences, University of Texas, Austin, TX**

Teaching Assistant for a course for non-majors, "*Introduction to Life Sciences*." I led recitation and review sessions, held office hours, and graded exams.

Fall 2002

### **Department of Chemistry, University of Texas, Austin, TX**

Teaching Assistant for, "*Organic Chemistry II*." I led recitation and review sessions, held office hours, and assisted in writing and grading exams. I developed "Arrow Pushing" review sessions to help students understand difficult mechanistic concepts presented in this course.

Fall 2001 -  
Spring 2002

### **Department of Chemistry, University of Texas, Austin, TX**

Laboratory Instructor for, "*Chemistry for Nurses*." I led a one-hour review session and two-hour laboratory course per week, held office hours, and wrote and graded laboratory exams. In this course, I sought to correlate key chemistry concepts to real-world health applications relevant to a clinical nurse.

## Research Mentoring & Advising Experience

- Spring 2012-  
Present **Graduate Advisor, Washington State University, Richland, WA**  
Mentor, advise, and help students formulate and accomplish organic chemistry and chemical biology research projects. Four students have completed master's degrees; I currently have three PhD students training in my research group.
- Spring 2009-  
Present **Advisor for Postdoctoral Research Fellows, PNNL, Richland, WA**  
Mentor and facilitate the design of research projects with postdoctoral fellows with the goal of inspiring high levels of independent thought and creativity. I have mentored eight fellows and I am presently mentoring five fellows.
- Spring 2009-  
Present **Advisor for Long-Term Undergraduate Interns, PNNL, Richland, WA**  
Mentor undergraduates in individual research projects, promote advanced project management by the students, and teach writing and presentation skills. I have mentored 13 undergraduate students who have spent >6 months in my research group. These students lead research efforts in my group, present their research at national conferences, and have published in primary roles on peer-reviewed journal articles. These students have gone on to careers and advanced studies in science, medicine, education, and pharmacology.
- 2009-  
Present **Advisor for the Science Undergraduate Laboratory Intern Program, PNNL, Richland, WA**  
Create individual research projects and mentor undergraduate students in this competitive internship program that provides opportunities for laboratory research in the STEM fields in my research group. These students spend 10-16 weeks in my research group. I have mentored 21 students, several who have participated as authors on peer-reviewed journal articles. These students have gone on to careers and advanced studies in science, medicine, education, and pharmacology.
- Fall 2013 -  
Fall 2014 **Advisor for the University of Oregon Master's in Chemistry Program**  
Mentored, advised, and designed a nine-month research project for a UO student pursuing her master's degree, for which the internship is a program requisite.
- Fall 2013 -  
Fall 2014 **Alternate Sponsored Fellow Program for Visiting Faculty, PNNL, Richland, WA**  
I hosted and mentored a visiting faculty member from China who wanted to learn specifics of our chemical biology approaches to understanding lignocellulose degradation for biofuels production.
- Fall 2006 -  
Fall 2008 **High School Laboratory Internships, The Scripps Research Inst., La Jolla, CA**  
This program provides laboratory research experiences to local high school students. I designed short- and long-term projects consistent with the skill levels and interests of the participating students. One student, Daniel Song, was a second author on a journal article describing our work in the *J. Am. Chem. Soc.*
- Spring 2004-  
Spring 2006 **Honors Program, University of Texas, Austin, TX**  
Mentored an undergraduate student in his required research project. In conjunction with my research advisor we designed an undergraduate laboratory lesson plan that translated elements of my graduate research into the undergraduate classroom. This curriculum was published in the *Journal of Chemical Education*.

## Research Project Management & Experience

- Oct 2017 -  
Present **Department of Energy, Biological & Environmental Research (DOE-BER)**  
Science Lead, Chemical Biology; ~\$300K/yr. In collaboration with researchers at PNNL, we are studying functional mechanisms by which soil microbes acquire nutrients, how these activities change with environmental perturbations, and how

	nutrient availability and utilization influences community composition and interactions.
Oct 2017 - Present	<b>PNNL Laboratory Directed Research &amp; Development (LDRD) Grant for Technology Commercialization</b> Principal Investigator. \$122K. The details of the research to be performed cannot be publically disclosed. The research involves the development of technologies to enable “precision microbiomes”.
July 2017 - Present	<b>IP Group</b> Principal Investigator. \$225.5K/yr1, \$750K/yr2, \$3M/yr3. The details of the research to be performed and the funding details are protected under a non-disclosure agreement and cannot be publically disclosed. The research involves chemical probes and the human gut microbiome.
Jan 2017 - Present	<b>Gordon and Betty Moore Foundation (funded through WSU, not PNNL)</b> Lead, Chemical Biology. \$56K/year. In collaboration with the University of Georgia, my group is developing new chemical probes to explore nutrient drivers of microbial spatial and functional interactions occurring in ocean microbiomes.
Oct 2016 - Present	<b>Acerta Pharma (an affiliate of AstraZeneca)</b> Principal Investigator. The details of the research to be performed and the funding details are protected under a non-disclosure agreement and cannot be publically disclosed.
May 2015 - Present	<b>PNNL Microbiomes in Transition Initiative, Gut Microbiome</b> Principal Investigator. \$280K/year. My group is using activity-based protein profiling to (i) evaluate the hypothesis that perturbations in the composition of the gut microbiome influence susceptibility by altering host metabolic capacity toward xenobiotics, and (ii) we are creating novel flow cytometry, imaging, and chemoproteomic analytics to profile the metabolically active subset of microbes and proteins within the gut microbiome.
Jun 2014 - Present	<b>US Department of Energy Biological and Environmental Research (DOE-BER) Mesoscale Imaging Project</b> Co-Investigator. \$80K/year. My group is using synthetic organic chemistry to develop chemical tools to characterize nutrient transport and intracellular fate in various microbes using super resolution fluorescence microscopy, electron microscopy, and other imaging techniques.
April 2014 - Present	<b>US National Institutes of Health (NIH), NHLBI, U01 HL122703</b> Lead, Chemical Biology. \$100K/year. My group is developing new chemical probes for subcellular imaging of phase I and II metabolism in mammalian lungs.
June 2013 - Present	<b>US NIH, NIGMS, P41 GM103493, Proteomics Research Ctr for Integrative Biol.</b> Co-Principal Investigator. \$2.34M/year. In conjunction with the proteomic and informatics developments and the collaborative projects within the Center, my chemical biology group is developing novel chemical probes and chemoproteomic capabilities to advance state-of-the-art proteomics measurements to impact biological research, primarily in drug resistant <i>Mycobacterium tuberculosis</i> and the human gut microbiome.
April 2013 - Present	<b>US NIH, NIEHS, P42 ES016465</b> Co-Principal Investigator. \$150K/year. My group is synthesizing chemical probes for characterizing phase I and II metabolism in the livers of embryonic, juvenile, and adult mice exposed to polyaromatic hydrocarbons, which are primary constituents of environmental toxins and cigarette smoke.
Feb 2013 - Present	<b>US NIH, NIAID, R01 AI104589</b> Principal Investigator at PNNL. \$180K/year. Our research team is employing proteomics to identify biomarkers of drug response in plasma from patients infected

- with *Mycobacterium tuberculosis* from Uganda, Vietnam, and the US. We are working in close collaboration with researchers at UCSF.
- Oct 2010 – Present  
**US DOE-Environmental & Molecular Sciences Laboratory Science Theme**  
 EMSL Project Lead. ~\$100K/year. My group develops activity-based probes and coordinates biological studies associated with collaborative EMSL User projects. Our projects are associated with redox in cyanobacteria, protein and lignocellulose degradation in soil microbiomes, and bioremediation of polyaromatic hydrocarbons.
- May 2016 - Sept 2017  
**PNNL Microbiomes in Transition Initiative, Soil Microbiome**  
 Co-Principal Investigator. \$150K/year. My group worked closely with soil and modeling experts to define spatial-function relationships in soil microbiomes related to cellulose and protein degradation.
- Oct 2014 - Sept 2017  
**PNNL Laboratory Directed Research & Development**  
 Principal Investigator. \$200K/year. My group is developing ‘Chromatin Activity Probing (ChAP)’ in which chemical probe mimics of nutrients bind DNA regulators and RNA-based riboswitches and permit the simultaneous determination of novel DNA/RNA regulators and the DNA they regulate.
- Oct 2013 - Sept 2016  
**US DOE-BER Pan-Omics Research Program**  
 Team Lead, Chemoproteomics & Chemical Biology. \$75K/year. My group is developing novel chemical probes, intact chemoproteomic methods, and chemoproteomic quantification tools. Our biology foci have been on lignocellulose degrading microbes and microbial communities, and hydrogen producing cyanobacteria.
- Oct 2012 - Sept 2017  
**US DOE-BER Foundational Scientific Focus Area**  
 Project Manager and Chemical Biology Lead. \$5.75M/year. My group is synthesizing novel chemical probes that mimic vitamins, metabolites, and osmolytes that are critical to microbial survival and signaling. The chemical tools are being used directly in complex microbial communities to characterize the drivers of microbial functional and spatial interactions.
- Oct 2010 - Sept 2015  
**US DOE-BER Biofuels Scientific Focus Area**  
 Co-Principal Investigator. \$150K/year. My research group developed and deployed probes to characterize Cysteine thiol oxidation and redox cycling directly in living cyanobacteria. These cyanobacteria are capable of photosynthetic biofuel production, e.g., hydrogen.
- Oct 2010 - Feb 2013  
**PNNL Microbial Communities Initiative**  
 Co-Principal Investigator. \$330K/year. My research team synthesized chemical tools to profile active enzymes participating in lignocellulose degradation in complex anaerobic microbial communities. Worked collaboratively with members of the initiative at PNNL and Washington State University to enhance proteomic technologies for better measurements and created novel software for improved data analysis.
- Oct 2009 - Sept 2012  
**PNNL Laboratory Directed Research & Development Award**  
 Principal Investigator. \$250K/year. My research team developed novel chemical tools and proteomic profiling platforms to facilitate research in human health and bioenergy. Specifically, we developed chemical probes to annotate pathogenic mechanisms microbial lung pathogens use to infect their host, and we developed a large suite of probes to characterize hydrolytic enzymes involved in lignocellulose degradation in aerobic and anaerobic prokaryotic and eukaryotic microbes.
- Jun 2006 - Sept 2008  
**Chemical Biology, The Scripps Research Institute, La Jolla, CA**  
 Postdoctoral Research Fellow of the California Breast Cancer Research Program in Prof. Benjamin Cravatt’s research group. I synthesized novel chemical tools to profile the functional activity of the cytochrome P450 enzyme family in living mice and human hepatocytes.

- Aug 2001 - May 2006  
**Organic Chemistry, University of Texas, Austin, TX**  
 Graduate Research Assistant and Fellow of the Dorothy Banks Foundation in Prof. Eric Anslyn's research group. I created synthetic arrays of chemical receptors that were used to mimic the human tongue by creating differential signatures of target ligands.
- May 2000 - Aug 2000  
**Organic Chemistry, University of Washington, Seattle, WA**  
 Undergraduate Intern in the NSF-Research Experience for Undergraduates program in Prof. Bill Trager's research group. I synthesized a fluorinated warfarin derivative for structure-based NMR measurements.

## Awards & Honors

- 2016 PNNL Exceptional Contribution Award  
 2016 PNNL Outstanding Performance Award  
 2015 PNNL Pathway to Excellence Award  
 2014 PNNL Fitzner-Eberhardt Award Nominee for Outstanding Contributions to Science Education  
 2014 PNNL Exceptional Contribution Award  
 2013 PNNL Outstanding Performance Award  
 2009 – 2012 PNNL Laboratory Directed Research & Development Award  
 2011 Young Innovator Award, American Chemical Society; Invited Speaker in the Young Innovator Symposium  
 2010 American Chemical Society Division of Analytical Chemistry: New Investigators in Analytical Chemistry, Pittcon Conference; Invited Speaker  
 2006 - 2008 Postdoctoral Research Fellow, California Breast Cancer Research Program  
 2005 - 2006 Dorothy Banks Graduate Research Fellow, Banks Foundation  
 2005 - 2006 Career Development Grant, University of Texas  
 2001 - 2002 Dean's Entrance Award, University of Texas  
 2001 Top Graduating Chemistry Major, George Fox University  
 2001 Graduated with Honors, *Cum laude*, George Fox University  
 2000 - 2001 Dick van Santen Award, American Chemical Society  
 2000 National Science Foundation - Research Experience for Undergraduates, University Washington Department of Medicinal Chemistry  
 2000 - 2001 Edwards-Holman Science Scholarship, Edwards-Holman Foundation  
 1997 - 2001 Dean's Scholar, George Fox University  
 1997 - 2001 Duke Academic Scholarship, George Fox University

## Book Chapters

- [1] Killinger BK<sup>‡</sup>, Brandvold KR<sup>‡</sup>, Ramos-Hunter SJ<sup>‡</sup> and **Wright AT**. "Chemoproteomic analyses by activity-based protein profiling." *Mass Spectrometry-Based Chemical Proteomics*. Ed. Tao WA. Wiley Press, **2017**, In Press.

## Patents

- [6] Nair RN, Killinger BK, Whidbey CW, Sadler NC and **Wright AT**. Activity-based characterization of mammalian and gut microbiome xeno- and endobiotic metabolism. (2017). Provisional patent application filed.
- [5] Brandvold KR, Whidbey CW and **Wright AT**. Activity-based assays to characterize and quantify bile salt hydrolases. (2017). Provisional patent application filed.
- [4] Lindemann SR and **Wright AT**. Chromatin activity precipitation method and system. (2015). Patent application submitted.
- [3] Anslyn EV, McDevitt JT, Shear JB, Neikirk DP, **Wright AT** and Zhong Z. System and method of analyte detection using differential receptors. U.S. Patent No. 2,009,215,646 (2009). Licensed by LabNow.

- [2] Anslyn EV, McDevitt JT, Shear JB, Neikirk DP, **Wright AT** and Zhong Z. System and method of analyte detection using differential receptors. WO2,007,005,666 (2007). Licensed by LabNow.
- [1] Anslyn EV, **Wright AT** and Zhong Z. Synthetic receptors for the detection of analytes. U.S. Patent No. 7,514,266 (2006). Licensed by Beacon Sciences.

## Invited Presentations

- [39] Society of Industrial Microbiology and Biotechnology, Denver, CO, July 2017, "Functional and spatial characterization of diverse microbiomes by activity-based protein profiling."
- [38] University of Washington, Department of Microbiology, Seattle, WA, May 2017, "Activity-based profiling of nutrient acquisition and metabolism in microbes & communities."
- [37] Oregon Health & Sciences University, Department of Biomedical Engineering and the Center for Health and Healing, Portland, OR, April 2017, "Functional profiling of xenobiotic and drug metabolism from host to microbiome."
- [36] International Frontiers Forum on the Gut Microbiome and Human Health, Nanjing Medical University, Nanjing, China, April 2017, "Multi-omic functional characterization of the gut microbiome."
- [35] Oregon State University, Center for Genome Research and Biocomputation Seminar Series, Corvallis, OR, March 2017, "Activity-based profiling of nutrient acquisition and metabolism in microbes & communities."
- [34] George Fox University, Distinguished Alumni Seminar, Chemistry & Biology Department, Newberg, OR, January 2017, "Revealing new biological discoveries in mammalian and microbial metabolism through a chemical biology lens."
- [33] University of Georgia, Sponsored jointly by the Microbiome Seminar Series and the Department of Marine Sciences, Athens, GA, December 2016, "Functional characterization of vitamin transport and metabolism in microbes."
- [32] University of Washington, Department of Medicinal Chemistry, Seattle, WA, November 2016, "Activity-based profiling of drug metabolism in the gut microbiome and the host liver."
- [31] Protein Function Discovery Workshop, Argonne National Laboratory, Chicago, IL, November 2016. Invited panelist.
- [30] UC Santa Cruz, Department of Microbiology and Environmental Toxicology, Santa Cruz, CA, October 2016, "Microbial vitamin transport and drug metabolism revealed by activity-based protein profiling."
- [29] Baylor College of Medicine, Department of Pharmacology, Houston, TX, October 2016, "Drug metabolism in the gut microbiome; chemical probing for protein function."
- [28] International Society for Microbial Ecology, session convener and invited speaker, Montreal, Quebec, Canada, August 2016, "Activity-based probing reveals new contributions for vitamin B<sub>12</sub> in modulation of microbial protein activity and gene regulation."
- [27] International Society for Microbial Ecology, roundtable speaker, Montreal, Quebec, Canada, August 2016, "The rapidly changing technology landscape of microbial systems research."
- [26] Washington State University, School of Molecular Biosciences, Pullman, WA, April 2016, "Live cell microbial protein profiling of B vitamin acquisition and disposition by chemical probing."
- [25] DOE Genomic Sciences Program Annual Meeting, Washington, DC, March 2016, "New chemical probes for microbial protein profiling reveal a role for vitamin B<sub>12</sub> in controlling folate and methionine metabolism."
- [24] Human Microbiome Congress, San Diego, CA, February 2016, "Activity-based protein profiling of drug metabolism in the gut microbiome."
- [23] Washington State University, Pullman, WA, August 2015, "Advancing our understanding of microbial regulatory processes and community associations by activity-based protein profiling."

- [22] North Carolina State University, Raleigh, NC, April 2015, "Characterization of *in situ* microbial metabolism, redox regulatory dynamics, and nutrient acquisition and disposition by chemical probing."
- [21] University of North Carolina, Greensboro, NC, April 2015, "Chemical probing to investigate human phase I metabolism and microbial protein functions and regulation."
- [20] Michigan State University, Lansing, MI, January 2015, "Characterization of *in situ* microbial metabolism, redox regulatory dynamics, and nutrient acquisition and disposition by chemical probing."
- [19] Peking University, Beijing, China, November 2014, "Characterization of cellular functions and regulation by chemical probing."
- [18] Beijing University of Chemical Technology, Beijing, China, November 2014, "Characterization of cellular functions and regulation by chemical probing."

## Scientific Service

- 2017. Session convener, Gordon Research Conference, High-Throughput Chemistry & Chemical Biology.
- 2017. Session convener, ACS Northwest Regional Meeting, Chemical Biology session.
- 2017. Planning committee and session convener for the international meeting of the Society for Industrial Microbiology & Biotechnology.
- 2015-Present. Chair, Environmental Microbiology Committee, Society for Industrial Microbiology & Biotechnology.
- 2016. Planning committee and session convener for the international meeting of the International Society for Microbial Ecology.
- 2015-2017. Session convener at the annual meetings of the Society for Industrial Microbiology & Biotechnology.
- 2015. Committee member for the UC Berkeley FutureBio Institute planning meeting.
- Reviewer for *Nature* journals, including *Nature Biotechnology*, *Nature Microbiology* and *Nature Chemical Biology*.
- Reviewer for American Chemical Society journals, including *ACS Chemical Biology*, *Journal of the American Chemical Society*, and the *Journal of Proteome Research*.

- Reviewer for the Royal Society of Chemistry journals, including *Chemical Communications*, *Molecular BioSystems*, and *Chemical Science*.
- Reviewer for PLoS journals, including *PLoS One* and *PLoS Biology*.
